Product features

- This demonstrator is operated by motor or hydraulic but buildings using this technology can be counterbalanced and operated manually or automatic, quickly and easily, in any location.
- These buildings can self-unload from a standard lorry.
- In addition this building can incorporate terraces or extra space on both sides.
- Buildings using this technology are extremely adaptable and can be constructed in many different materials and in many different sizes and styles to suit almost any application or geography.
- Complimentary modules can be attached to both ends to provide additional facilities such as water processing, air Locks or extra storage space
